

PRODUCT MANUAL: AETHER-7 SMART HOME HUB

DOCUMENT VERSION: 4.2.1

DATE: 2025-11-24

CLASSIFICATION: PUBLIC

SECTION 1: INTRODUCTION

Welcome to the Aether-7 Smart Home Hub. This device is designed to centralize your home automation experience.

The Aether-7 acts as a bridge between your Wi-Fi network and Zigbee, Z-Wave, and Matter devices.

Unlike previous generations, the Aether-7 processes all voice commands locally on the device using the Neural-X chip.

This ensures that your voice data never leaves your home, providing a significant privacy upgrade over cloud-based assistants.

The device features a 7-inch OLED touch display with a resolution of 1920x1080.

It includes dual front-facing speakers and a far-field microphone array capable of detecting voice commands from up to 30 feet away.

The chassis is made from recycled aluminum and includes a non-slip rubber base.

Power is supplied via a USB-C PD adapter (included in the box).

SECTION 2: IMPORTANT SAFETY WARNINGS

1. Do not submerge the Aether-7 in water. It is IP54 rated (splash resistant) but not waterproof.
2. Do not block the ventilation grills on the rear of the unit. Overheating may cause the device to shut down.
3. Use only the provided USB-C power adapter. Third-party adapters with less than 45W output will result in "Low Power" warnings.
4. Keep the device away from direct heat sources like radiators or stove tops.
5. The device contains a small lithium-ion backup battery. Do not puncture the device.
6. If the device emits smoke or a strange odor, disconnect power immediately and contact support.
7. Do not attempt to open the casing. There are no user-serviceable parts inside.
8. Listening to audio at maximum volume for extended periods may damage the speakers.
9. Ensure the power cord is not a tripping hazard.
10. Keep small accessories away from children under 3 years old.

SECTION 3: INITIAL SETUP GUIDE
